

Setting Up Your Nokia Equipment at Home

INITIAL SET UP

This is how your Nokia ONT to the Nokia Beacon WiFi router is set up in your home at time of installation.

The Green connection is Dobson's fiber into the ONT. Do not disconnect.

An Ethernet Cable runs from the ONT to the WiFi router's blue port, labeled WAN. This allows for you to connect your devices via WiFi throughout your home.

If you want to plug directly into the Nokia Beacon, please use the yellow port, labeled LAN.
